Decision Infrastructure Pilot

Make one recurring decision work.

For an operating team whose recurring decisions depend on disconnected reports and manual handoffs. Build one bounded path from evidence to review, action and follow-through.

QUESTION — EVIDENCE — NEXT ACTION

01 Bound the operating loop

Choose one recurring decision, a defined source set and named operational owner. Agree permissions, source quality, review controls, success measures and acceptance tests before building.

02 Put the path to work

A working decision view, bounded data environment, human-review points and owner-and-action workflow. Implement agreed integrations only; make assumptions and exceptions visible.

03 Handoff with control

Test the agreed cases, document operation and recovery, and train the named owner. Record remaining limitations and the implementation backlog. Expansion, hosting and ongoing support are separately agreed.

WHAT WE NEED

A sponsor, operating and data owners, authorized source access, a testable workflow and time for acceptance. A Decision Brief is useful but is not a prerequisite.

TIMING & FEE

Indicative 60 days after scoped kickoff and access readiness. Fixed scoped fee. Milestones, IP terms, acceptance and operating responsibilities agreed in writing.

A bounded pilot is not an enterprise-wide transformation or an autonomous decision-maker. Regulated decisions retain the appropriate human and specialist review. No guaranteed savings or ROI.
